-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese patent document (2857840) in view of (US 3688525).

Japanese patent document (2857840) discloses a flat knitting device as claimed including A flat knitting machine comprising a yarn carrier and a movable yam guide provided along a yarn guide rail, and a carriage having accompanying means, wherein the accompanying means is capable of allowing accompaniment of the yam carrier, and releasing the accompaniment of the yam carrier, and also capable of allowing accompaniment of the movable yam guide, and releasing the accompaniment of the movable yam guide; and control data for the movable yam guide is provided in a

knitting program to control the carriage such that the position of the movable yarn guide is kept within a predetermined range relative to the yarn carder for allowing the accompaniment of the movable yarn guide by the accompanying means.

US 3688525 teaches a

configuration wherein the carrier 11 (the yarn carrier) and the carrier 12 (the movable yarn guide) are linked and the carrier 11 can be captured and released by means of the collector peg 35 (the capture means) that is mounted upon the cam box (the carriage) (example 1), and further discloses a configuration wherein the carrier 51 (the yarn carrier) and the carrier 52 (the movable yarn guide) are provided independently from one another and two collector pegs 66 and 67 (the plurality of capture means) are mounted upon the cam box (the carriage) so that the carrier 51 can be captured and released by means of the collector peg 67 (one of the capture means) and the carrier 52 can be captured and released by means of the collector peg 66 (the other capture means) independently from one another (example 2). In addition, document 3 also indicates that it is acceptable to configure so that the carrier 51 and the carrier 52 are disposed upon a single rail with a space therebetween (in

It would have been obvious at the time the invention was made to substitute a configuration wherein the carrier and the movable yarn guide are driven independently by

capture means wherein the yarn carrier and movable yarn guide are linked so that both members maintain a prescribed positional relationship.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
